

## Psychology 290 Research Application

Psychology 290 course credit is a mechanism that allows undergraduates to earn course credit for conducting laboratory research (up to 4 credit hours in any semester and maximum of 9 credit hours across semesters). You can learn more about the Psych 290 option at <https://psychology.illinois.edu/research/undergraduate-research/psyc-290-research-experience-psychology>. Each semester, laboratories will post available positions at <https://psychology.illinois.edu/research/research-opportunities>. The Psychology Department also hosts a research fair each semester where you can learn more about available positions.

Laboratories have varying requirements for Psych 290 students. Some require specific coursework or prior research experience, but many do not. This form collects information that laboratories in the psychology department often use when considering applicants for undergrad research positions. When emailing a faculty person or the contact person for a listed position, you should attach your completed version of this form. Some laboratories might then request additional information, but this form provides the core information required by most laboratories.

Name:

Preferred name (if different):

Preferred pronouns:

NetID:

UIN:

Preferred email:

Major:

Concentration (if any):

Expected graduation (e.g., Spring 2026):

GPA:

Contextualizing information about your GPA (if needed):

Primary area(s) of interest:

Relevant coursework (give the department, course number, course name, and grade):

Prior research experience (if any). Please provide the start/end date and faculty advisor.

Related employment experience (if any)

Related experiences other than research or employment (if any)

Software/programming skills (if any)

Languages that you speak/read (please indicate level of fluency/proficiency)

Other skills that might be useful in a laboratory
